EDUCATION

Albert-Ludwigs-Universität
Bachelor of Computer Science

Erasmus Program exchange year

Universidad de la Laguna
Grado en Ingeniería Informática

Freiburg, Germany
Oct 2025 - Sep 2026

Santa Cruz de Tenerife, Spain
Sep 2023 - Present

PROFESSIONAL EXPERIENCE

JURA Materials AG

HR Data Analyst Intern

Aarau, Switzerland
Dec 2025 - Aug 2026

- Analyzed and structured HR data across Excel datasets containing information on 3,000+ employees, answering approximately 300 human capital reporting questions on a single report project.
- Developed automated employee registration and workforce management processes using Excel VBA and Power Query, maintaining unique employee IDs while preserving open positions.
- Automated recurring workforce updates, reducing manual work and saving hours when restructuring employee data; developed a user manual for the workforce registration system.
- Prepared HR reports and datasets used by senior management and key corporate stakeholders.
- Link: Recommendation letter available from JURA.

Nuclear Power Plant Leibstadt AG

Scaffolder

Leibstadt, Switzerland
Apr 2026 - May 2026

- Worked as part of an external team contracted for the plant's annual safety inspection, working inside the reactor and following established safety and operational procedures.
- Built and dismantled scaffolding for maintenance, construction, and cleaning work throughout the nuclear power plant.

INITIATIVES & PROJECTS

VEGGA

Founder & Developer

Freiburg, Germany
Mar 2026 - Present

- Built a personal software initiative focused on AI, data engineering, and backend development, inspired by real-world problems and opportunities to automate repetitive manual work identified through my own experience.
- Developed a personal portfolio using a custom HTTP server built from scratch in Python, alongside HTML, CSS, and SQL, and deployed it on Railway at diego Vegas.de, featuring interactive demos and projects with potential for future private development.

LECTER

RAG Engine

- Developed a Python-based Retrieval-Augmented Generation (RAG) system for querying large documents using vector embeddings and semantic search.
- Implemented document extraction, chunking, embedding generation, similarity search, and context-based LLM responses using Python and the OpenAI API, with a working demo available through my portfolio.

ENTITY

Search Engine

- Developed a semantic search engine combining Q-grams, Wikidata, SPARQL, and SQL to identify and rank entities from large datasets.
- Developed as an extension of concepts learned in my Databases and Information Systems coursework at the University of Freiburg, using a curated dataset provided for the course.

DABID

AI HR Report Tool

- Developed an AI-powered application that processes structured business data and allows users to query it using natural language, combining Python, SQL, embeddings, and LLMs, inspired by a need for this type of tool that I identified during my work at JURA.
- Built the application from the ground up, including data processing, authentication, database management, and AI-powered question answering.

SKILLS

Python (Primary Skill), SQL, C++, GitHub, Object-Oriented, Algorithms, Reinforcement Learning, Databases and Information Systems, Data Engineering, Excel, Spanish (Native), English (C1), German (A2)
